### The Program

Students completing this program will have demonstrated the ability to:

- collect data; know where to acquire such and what technology should be employed
- layout and design best geographics
- develop and apply information literacy
- understand causes and implications of spatial interactions and movement patterns
- demonstrate skills and competencies of geographic traditions
- analyze, synthesize, and interpret spatial information
- apply geographic thinking in real-world contexts
- analyze and/or appraise real-world societal issues.

We offer a quality undergraduate program incorporating a wide range of courses in human and physical geography, as well as cartography and geospatial techniques. Students obtain a strong geographic foundation through a sequence of introductory classes, along with a skills-based methodology course and research lab. Geographic concepts, ideas, and skills are developed and mastered in upper-division regional, systematic, and in-depth geography courses. Our majors further develop and demonstrate geographic mastery through a research-based senior capstone. While our program is designed to ensure breadth in geographic education, students are also encouraged to develop depth by specializing in one of the department's three concentration areas:

- The Human World
- The Physical Environment
- Geospatial Systems

The department upholds a strong tradition of field study, including expeditions to the Tibetan Plateau, the Cascades, the Sierra Nevada, and other landscapes of the American west, as well as linkages to overseas programs in China, Europe, and Latin America.

### Preparation

In high school take history, government, mathematics, science, and a foreign language.
